

ARE YOUR SHOES CLEAN?

You could be spreading invasive species on the trail.

CLEAN YOUR SHOES. STOP INVASIVE SPECIES.

Mud and seeds carry invasive plants. Use the boot brush under this sign to clean off before and after hiking.

HOW TO PREVENT THE SPREAD OF HARMFUL PLANTS

1. Arrive with clean gear—
Clean your shoes, clothes, packs and
pets before exploring.

2. Stay on marked trails to reduce the
chance to pick up seeds and mud that
carry invasive species.

3. Leave with clean gear—
Clean your shoes, clothes, packs and
pets after exploring.

WHAT ARE INVASIVE SPECIES?

Any organisms that are not native to
an area and cause harm.

Invasive species harm native wildlife,
habitats and human health.

Invasive species can be spread
unintentionally through human activity.
